KURCHI PROJECTS

Simple project flow

From Ola showroom creation to installation and invoice

1

Ola creates the showroom

Add the franchisee owner, showroom address, GST details and site contact.

2

Choose the BOQ and submit advance

Pick the fixed Standard BOQ or adjust quantities in the Modular BOQ. Enter payment amount and reference.

3

Accounts verifies payment

Accounts checks the payment proof. Once approved, the project reaches Kurchi Admin.

4

Admin moves each BOQ item

Admin updates every item separately: production, dispatch and delivery - not the whole project at once.

5

Installation team has only two actions

First confirm what arrived. Then, after fitting, tap Mark installed. A damaged or short item is reported and waits for replacement.

6

Invoice and closure

Accounts creates the invoice after the installation is complete. Ola and the franchisee can follow item-by-item progress.

Installation rule:

Receive once -> Mark installed once. There is no reverse button or status cycling.
